Side Event @ AAL Forum 2014

We aim to facilitate  
this choice...

...to contribute to a wider use of  
new innovative services.

## Welcome to AALuis!

The user interface (UI) is an important feature of interaction between users and AAL services. Thus the main focus of the project lies on the development of innovative UIs and a layer for the easy and standardized integration of new and existing UIs.

The aim is to build these interfaces and the connection layer on open and already existing middleware platforms. The improvement of the user interfaces and thus of devices and solutions for older people based on design for-all principles shall improve older people's access to, acceptance of and use of ICT-based services.

The project AALuis is cofunded by the AAL Joint Programme (REF. AAL-2010-3-070) and the following National Authorities and R&D programs in Austria, Germany and The Netherlands:

Bundesministerium für Verkehr,  
Innovation und Technologie  
(BMVIT) / Federal Ministry for  
Transport, Innovation and  
Technology  
Programm benefit
